

Murtaza S. Ahmed

Undergrad Engineer | Distributed Systems, ML Systems & Infra (Backend focus)

murtazaofficial@protonmail.com | +91 9390341984 | onerealti.github.io/portfolio | github.com/onerealti | www.linkedin.com/in/murahmed

Focusing on AI infrastructure, particularly GPU cluster orchestration, inference systems, model routing, resource allocation and workload scheduling.

Professional Experience

Undergraduate Research Assistant (Edge AI Systems) Department of Mechanical Engineering (MJCET)	Dec 2025 -- Present <i>Hyderabad, TG</i>
- Selected for an institution-funded R&D program under faculty supervision. - Built a complete edge AI system on NVIDIA Jetson Nano 4GB Developer Kit, integrating an IMX719 camera and soil sensors for real-time field operation. - Developed the on-device inference pipeline and executed real-time inference under compute and memory constraints. - Achieved 40–70 ms latency (14–20 FPS) using TensorRT (FP16) optimization. - Processed camera and sensor data continuously at 5–10 Hz with low-latency performance. - Designed a stable execution loop enabling reliable operation over 4–6 hour field deployments.	
Undergraduate Researcher (R&D Program) Department of Mechanical Engineering (MJCET)	March 2026 -- Present <i>Hyderabad, TG</i>
- Design and implementation of an Adaptive Multi-Objective Policy Engine for Resilient Orchestration in Heterogeneous LLM Clusters. - Researching adaptive workload scheduling and hardware-aware resource allocation strategies for heterogeneous LLM inference systems. - Exploring fault-tolerant orchestration approaches for distributed AI workloads across mixed compute environments.	
Technical Contributor (AI & ML) Horizon Research Group	April 2025 -- July 2025 <i>Remote</i>
- Contributed technical research regarding AI/ML workloads and inference performance metrics. - Investigated distributed scheduling strategies and model routing logic for scale-out neural architectures.	
Builder & Systems Architect Verity (Decentralized Verification Platform)	July 2025 -- Present <i>Hyderabad, TG</i>
- Designing and implementing a system to verify digital media provenance using blockchain and decentralized storage. - Integrating AI modules for manipulation detection and automated claim extraction. - Developing media provenance infrastructure using distributed storage systems including IPFS and Arweave. - Building concurrent ingestion pipelines and immutable audit logging mechanisms for ML-based verification workflows.	
Backend Infrastructure Engineer Freelance Consulting	Sept 2024 -- Present <i>Hyderabad, TG</i>
- Migrated client applications to containerized Linux deployment environments with automated CI/CD workflows. - Designed backend APIs and optimized PostgreSQL schemas for improved concurrency and deployment reliability.	

Projects

Smart Agri Four-Legged Bot (SAFL-B) <i>(C, Python, UART/Serial, I2C, GPIO, Hardware Control)</i>	Dec 2025
- Awarded 1st Place at the MAKEFORHYDERABAD 2-Day Makeathon for autonomous robotics systems integration. - Implemented deterministic UART/Serial communication protocols for multi-joint motor control. - Developed telemetry stabilization routines to reduce terrain-induced sensor and image noise.	
Deterministic Workspace Provisioning <i>(Bash, Linux, Arch Linux, Podman, Git)</i>	June 2025
- Built automated provisioning pipelines for lightweight Linux workstation deployment using Arch Linux and shell automation. - Configured container runtimes (Docker/Podman) and developer tools to deploy reproducible workspace layers.	

Technical Skills

Languages:	C, Python, Bash, PostgreSQL, Git
Systems:	Linux, Arch Linux, Docker, Kubernetes, Podman
Hardware & Interfaces:	UART/Serial, I2C, GPIO

Education

Bachelor of Engineering in Mechanical Engineering

Muffakham Jah College of Engineering & Technology (Osmania University)

May 2028

Hyderabad, TG

- Relevant Coursework: Scientific Computing, Embedded Systems Programming, System Modeling & Simulation
